
THE MISSION

Bun in the Oven Fertility Clinic aims to provide a safe loving home for the newborn babies being brought into this world. We hope to make their conception as ethical as possible on all levels- sex cell donors, surrogates, preimplantation genetic diagnosis (PGD) and In Vitro Fertilization (IVF). This clinic provides counseling for all parties involved to ensure that there is a comprehensive understanding of the process and that any consent is informed and not coerced.

Bun in the Oven Fertility Clinic also functions on a sliding fee scale to accommodate for a number of financial backgrounds because we believe that everyone should have access to ART if they so need it. Bun in the Over Fertility Clinic also donates part of it's profits to causes that prevent infertility.

SINCE 2016

BUN IN THE OVEN

FERTILITY CLINIC

Because sometimes making family
takes a lot of preparation

OUR SERVICES

□ Sperm Donation □

The clinic has a variety of sperm donors available for use by intended parents. All sperm donors are not anonymous and are all cleared by counselors for their well-being. They are also screened for common medical conditions.

□ Egg Donation □

The clinic also has a variety of egg donors available for use by intended parents. All sperm donors are also not anonymous and provide the same information and receive the same counseling as sperm donors. Unlike other clinics, we do not believe that Ivy League educations warrant exorbitant price tags and pay everyone fairly and equally regardless of educational background.

□ Surrogacy □

We understand that a surrogate's mental and emotional well being is just as important as physical maintenance when carrying a child to term and ensure that a variety of counseling (nutritional, financial, psychological) is provided. At the same time, we meticulously work out contingency plans for any situation that intended parents and surrogates can undergo.

□ In Vitro Fertilization (IVF) □

IVF cycles can be very costly and impersonal but at our clinic we work to accommodate to everyone's price range and everyone's personal wishes. We can understand how difficult it can feel and work to support you throughout the process.

OUR SERVICES

Preimplantation Genetic Diagnosis (PGD)

We offer PGD for parents to find out if their child will have a debilitating medical condition. We do not offer PGD to select for a particular hair or eye color nor any particular character traits. We support parent's decisions upon receiving full information of their child's possible conditions and work hard to inform parents about their rights.

Selective Reduction

We provide selective reduction services for those parents who may feel it is necessary, whether it be for personal reasons, financial reasons, or health reasons. We value the autonomy of the parents as well as the child and try to be as humane as possible throughout the process.

Sterilization

We offer sterilization services for any parties, male or female, that desire it. We offer a variety of counseling options to make sure that patients are fully informed of their decisions as well as the permanence of their actions and possible future health consequences.

TESTIMONIALS

EMILY PARKER

EGG DONOR

Not once during the process of becoming an egg donor did I feel pressured. The staff provided full disclosure about the process and what was to be expected. I was very fairly compensated as well. Unlike other fertility clinics I was not once told that I should be doing this for the "right" reasons. They encouraged honesty and autonomy throughout the process for me as well as the parents to be.

JOHNSON AND IRA

BELMONT

IVF RECIPIENTS

Through this clinic we managed to find a sperm donor without concern over personal characteristics. We were well informed at every step of the process and given the opportunity to handle medical aspects as personally as we wanted. We can happily say we now have a baby girl by the name of Emma.
